

SUSY-AI: fast exclusion determination using full ATLAS results with machine learning

Sascha Caron, Jong Soo Kim, Krzysztof Rolbiecki, Roberto Ruiz de Austri, Bob Stienen

Talk based on [[1605.02797](#)]

Model exclusion in Particle Physics

- Model of new physics needed to solve mystery of gravity, dark matter, hierarchy problem
- Supersymmetry is a serious candidate for this position, but not observed (yet?)

Goal set limits on models and its parameters

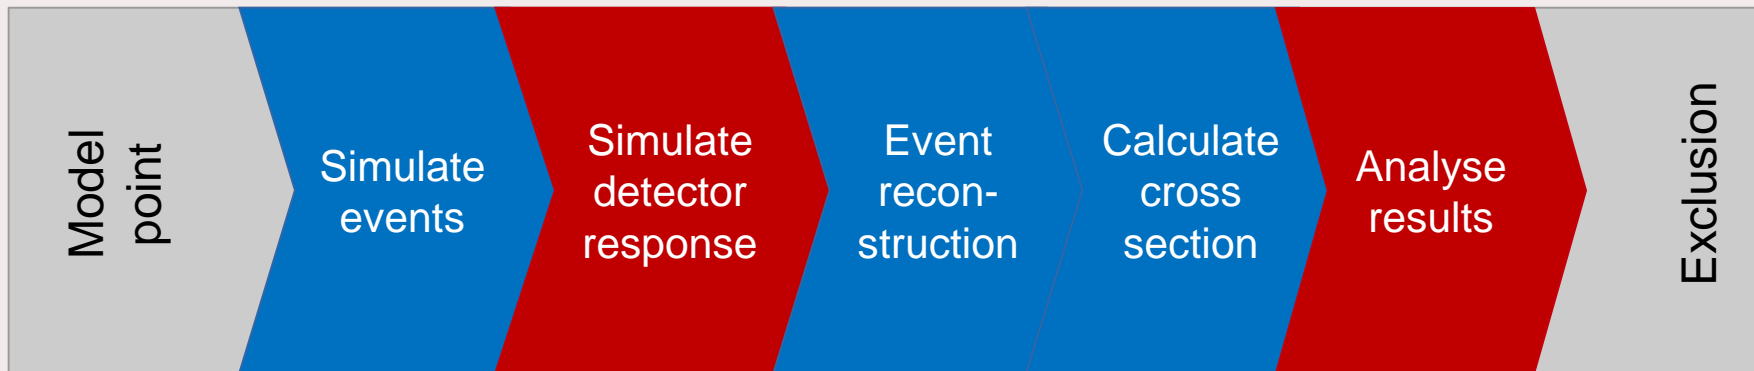

- Published limits suffer from their projections

Exclusion analysis

$T = O(\text{hours})$

Machine Learning

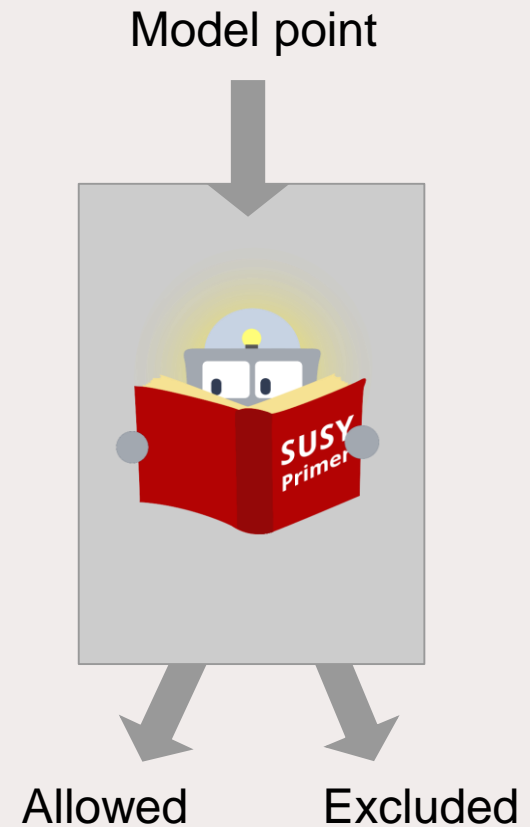

Data property prediction based on example (training) data

- Learn possibly hard data pattern
- Wide range of algorithms...
 - Boosted decision trees
 - Neural networks
 - Decision trees
 - Random Forest
- ... and applications
 - Spam detection
 - Health care
 - Advertising
 - Auto pilot in cars

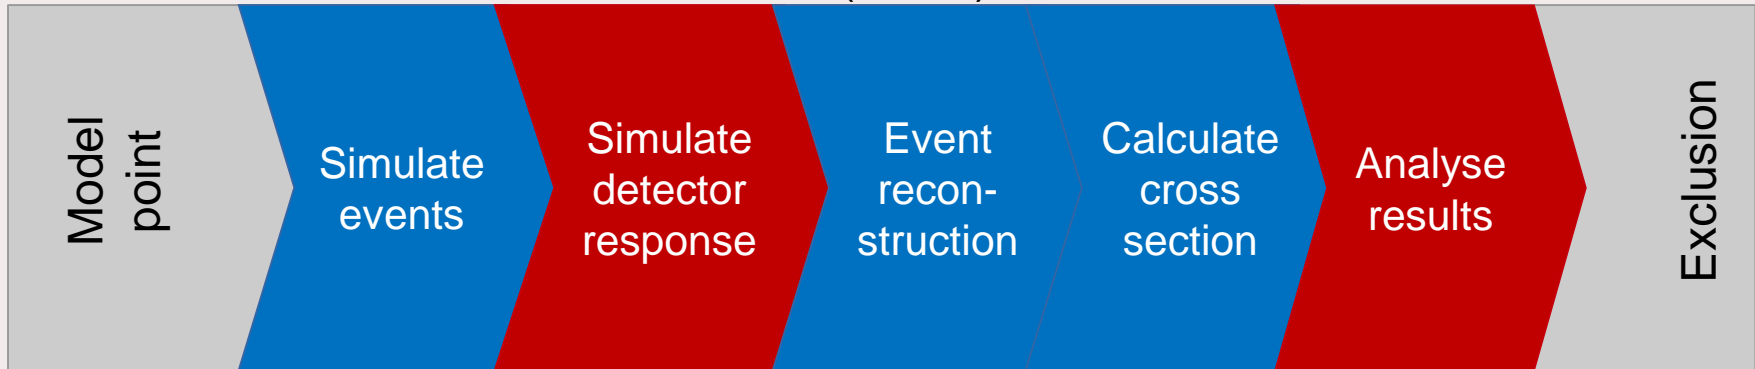

Machine Learning Applied

- Training data: model points in supersymmetric model with only phenomenologically relevant parameters (pMSSM)
source: ATLAS [[1508.06608](#)]
- Testing data: independent (unseen) data

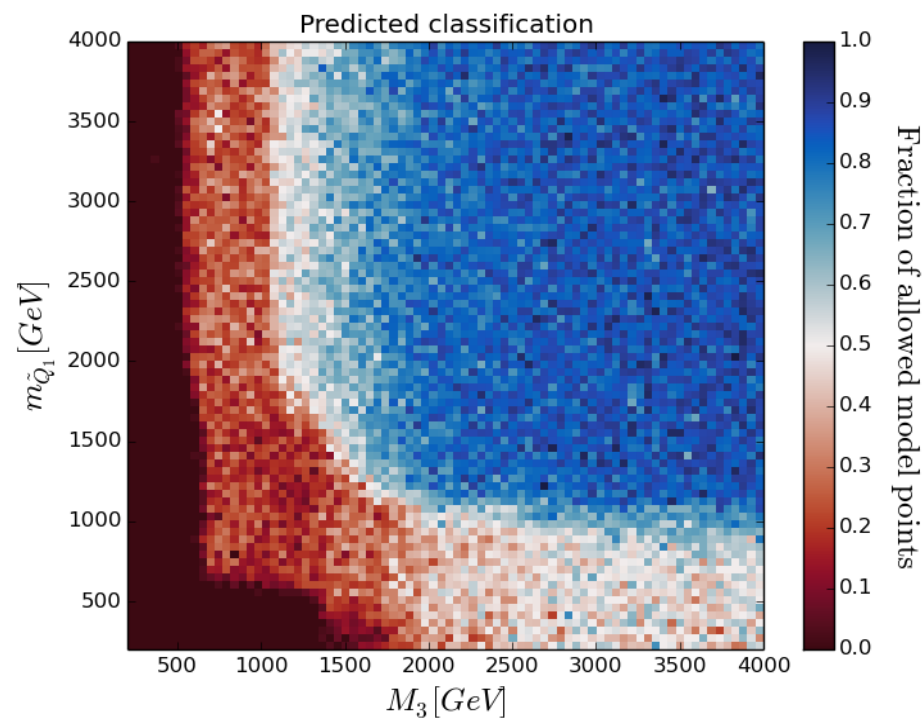

Exclusion analysis

$T = O(\text{hours})$

$T = < O(1 \text{ ms})$

Why use SUSY-AI / Machine Learning

- Fast statistical results based on earlier analyses
- High accuracy (93.2%) by learning hard-to-see relations in data
- Works also in submodels of the learned model
- Providing confidence levels on prediction

- Publishing multivariate data
- Creating plots not present in paper
- Re-usability and persistence of analysis and results

SUSY-AI (Online)

- Tool has been published
 - <https://susyai.hepforge.org>
 - Python interface to classifier
 - Scikit-learn package for ML implementation
- Online interface
 - <http://susy-ai.org/>
 - All functionalities except batch predictions
 - Predictions in < 2 seconds

SUSY-AI VERSION 2.1.0

S. Caron, J.S. Kim, K. Rolbiecki, R. Ruiz de Austri and B. Stienen,
The BSM-AI project: SUSY-AI - Generalizing LHC limits on Supersymmetry with
Machine Learning
[arXiv:1605.02797]

Direct parameter input | Upload .sisha file

Slide the parameters to the requested values or click 'set value' to set a variable manually. Prediction can only be performed if all parameters have been set. More information about the parameters (what they are and where they can be found in .sisha files) can be found [here](#).

M1	2206 GeV	M2	1517 GeV	M3	3017 GeV	mL1	2479 GeV
mL3	2854 GeV	mE1	3518 GeV	mE3	3431 GeV	mQ1	2914 GeV
mQ3	2013 GeV	mU1	2371 GeV	mU3	2702 GeV	mD1	2464 GeV
mD3	3394 GeV	At	4133 GeV	Ab	1930 GeV	Atau	3290 GeV
mu	2182 GeV	MA ²	2.610e+7 GeV ²	tan(beta)	50		

How to... Predict

Analysis: 8 TeV 13 TeV CL: 0.0 0.68 0.90 0.95 0.98 0.99

- ✘ 8.sisha
- ✔ Direct parameter input (15:06:50)

Summary and Conclusions

- High-speed + high accuracy prediction of ATLAS exclusion
- Applicable to phenomenological supersymmetry and its submodels
- Programmatic and online interface (<http://www.susy-ai.org>)

- First time use of Machine Learning for publishing and extrapolating multivariate results
- More models will be done
 - Dark Matter models
 - Higgs couplings
 - Effective Field Theories
 - ...

- Development can be accelerated with more public data
